DETAILED ACTION

Allowable Subject Matter

Claims 2-11 are allowed.

The following is an examiner's statement of reasons for allowance: Consider independent claims 2, the best prior arts of record found during the examination of the present application are: **Todd et al. (USPN 6,035,183) and Reial (USPN 2004/0053592)**.

In view of the present application, Todd discloses calculating and analyzing signal quality, and displaying signal strength bars based on the results of the analysis.

Compared to the present invention Todd fails to disclose Todd et al. as modified by Yang does not explicitly disclose summing N number of RSSI_AVR values obtained by the execution of step e and determining the sum of the RSSI AVR values as an analysis result of the RSSI values for the predetermined time T and summing N number of C/I_AVR values calculated by the execution of step e, and determining the sum of the C/I_AVR values as an analysis result of the C/I ratios for the predetermined time T.

Reial discloses computing an interference ratio and using the sum of average interference power estimates to produce an analysis result of signal quality.

However, compared to the present application, Reial fails to disclose a. consecutively collecting a predetermined number of RSSI values for a predetermined unit time t and storing the collected RSSI values; b. consecutively calculating a predetermined number of C/I ratios for the predetermined unit time t and storing the

calculated C/I ratios; c. calculating an average value of n higher RSSI among the average values of the predetermined number of RSSI values (RSSI_AVR value) collected in step a and storing the calculated RSSI_AVR value; d. calculating an average value of n higher C/I among the average values of the predetermined number of C/I ratios (C/I_AVR value) calculated in step b and storing the calculated C/I_AVR value; e. repeating steps a-d a predetermined number N times; t. summing said N number of RSSI_AVR values obtained by the execution of step e and determining the sum of the RSSI_AVR values as an analysis result of the RSSI values for the predetermined time T; and g. summing said N number of C/I_AVR values calculated by the execution of step e, and determining the sum of the C/I_AVR values as an analysis result of the C/I ratios for the predetermined time T.

In light of the combination of the above cited references, the present invention is novel and non-obvious since the cited prior arts of record do not contain either explicitly or implicitly the limitations as a whole as disclosed in claim 1. In addition, any reasonable combination of the cited references cannot be used to reconstruct the claimed invention. Therefore, the present application as disclosed is allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
